

Speaker-less Audio
for Luxury Yachts

Challenge: Luxury Yacht Owners Demand High Fidelity State of The Art Audio In The Cabin Environment

Transducers attached to the back of interior panels and digital processing enables high fidelity, immersive audio.

Our Solution: Interior Panels Become The Speakers

- **Immersive** - High Fidelity state of the art audio resulting in a uniform Immersive Audio Experience throughout the entire cabin space.
- **Aesthetic** - Customized, smooth Interior Theme is maintained by eliminating the installation of commodity speakers and speaker grills.
- **Efficient** - Package space is improved by the Elimination of Speakers, replaced with small, hidden transducers, that vibrate the panels, making them the speakers.
- **Appropriate** - Lighter materials used resulting in System Weight Reduction.

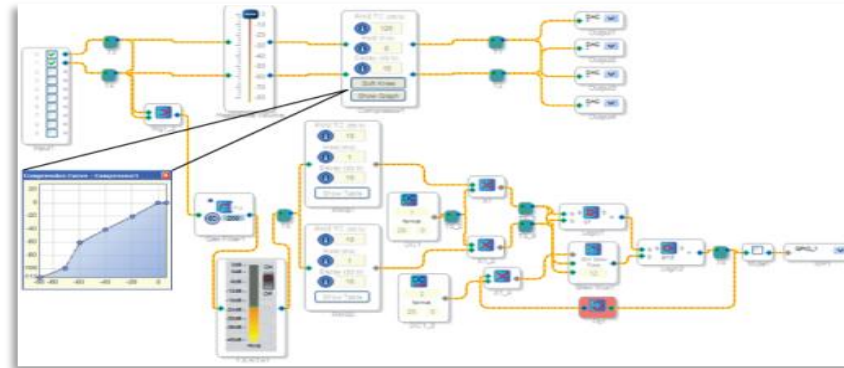

Technology Benefits

Design Optimizes the Performance of the Interior Panels

- High Power
- Low Distortion
- Increased Output
- Light Weight
- Low profile
- Optimized for the application

Optimized Transducers

- Digital audio processing that tunes the system:
- A custom profile is created for each cabin space.
- This flexibility provides superior sound quality and clarity regardless of material selection.
